

## DOUBLE 180° SWIVEL TYPE ALUMINIUM ALLOY FIRE HOSE REEL

The double 180° swivel gives maximum area coverage to the actual user. The aluminum alloy-based component is durable in all atmospheric optimum performance, 100% result and user-friendly operations. The complete unit is carefully power coated to obtain its attractive looks.

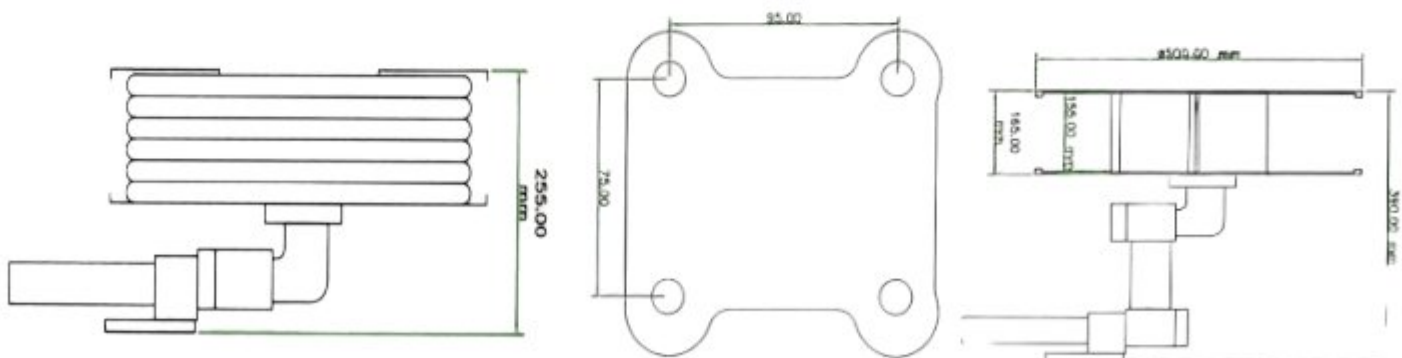

To achieved high quality product performance, each unit of fire hose reel goes through hydrostatic pressure test and regular random performance test, which ensures reliability and compliance to the standard.

The hose reel is supplied complete with high quality semi rigid hose, hose clip and high performance jet and spray nylon nozzle.

### Specification:

|                  |                                                                             |
|------------------|-----------------------------------------------------------------------------|
| Side Plates      | : High quality mild steel perfectly shaped and EPE powder coated            |
| Water way        | : Aluminum alloy & GI coated steel against corrosion duly EPE powder coated |
| Pipe             | : High quality nylon<br>Diameter - 1"<br>Length - 30 Mtr or 40 Mtr          |
| Nozzle           | : Durable nylon material<br>Jet, spray & shut by hand revolving             |
| Swivel           | : 108° double swivel                                                        |
| Working pressure | : 12 Bar (217 psi)                                                          |
| Test pressure    | : 18 Bar (261 psi)                                                          |
